G.V.H. 19.67 is made of a braided fiberglass and it is treated with synthetic resins so that it does not fray and it resists mechanical wear.

G.V.H. 19.67 is particularly resistant to high temperatures consequently it can be used when an exceptional resistance to heat is needed. (Electric equipments, ovens, kitchens, etc.)

It is usually used in electric threads to increase thermal resistance.

Total unsaturation of the fiberglass yarn allows the maximum improvement of insulating varnishes and resins.
